FOR IMMEDIATE RELEASE

## **Bully Dog Further Expands their Stage 2 Offering**

AMERICAN FALLS, ID - November 14, 2011

Bully Dog entered the intake market with a few simple objectives: keep hot air out of the intake stream by ensuring systems pull air from cold air sources, accommodate a high flow air filter and improve the look of the engine bay with an aesthetically pleasing, high quality product. Following these basic precepts, Bully Dog developed and produced a line of uniquely efficient intakes capable of providing more and colder air to your engine. Real world results from these efforts include improved fuel economy, more horsepower and torque, lower cost of ownership, premium build quality and a clean, attractive install.

Bully Dog also listens to its users, and has heard many requests for more Stage 2 systems. Many applications are already released, and on December 6, 2011, Stage 2 Intake systems for the following trucks will be made available as well:

Dodge 5.9L Cummins (#52102)  
Ford 3.5L F-150 Eco Boost (#51202)  
Ford 5.0L F-150 (#51201)  
Ford 6.0L Power Stroke (#51105)  
Ford 6.7L Power Stroke (#51104)

Even more Stage 2 systems are in development - stay tuned for more information in the coming months.
